Trans. of Uspekhi Khimii (USSR) 1959, v. 28, no. 9, p. 1114-1133.

A review of the literature shows that the presence of the hemiacetal reducing group at the end of the molecule has an important influence on the degradation of mono-, di- and polysaccharides in an alkaline medium in the absence of oxidizing agents. This group is the active center of the transformations of reducing sugars. Owing to its enolizing tendency it can give unstable enediols of polyhydroxy compounds which undergo further changes in an alkaline medium. The influence of the hemiacetal group on molecules of di- and polysaccharides mainly takes the form of weakening of the (Chemistry--Organic, TT, v. 5, no. 9) (over)
